Company Profile

Quality, pleasure in innovative processing techniques and highly motivated staff are the Elkamet Kunststofftechnik GmbH success factors. Founded in 1955 and based in Biedenkopf, central Hesse, the family run company managed by Eberhard Flammer and Michael Parsch is a fast-growing firm with a strong export division. Elkamet Kunststofftechnik GmbH currently employs more than 1.200 people, including 130 apprentices and participants in the dual study programs of the "StudiumPlus". The commitment, the competence and the high identification of the employees with the Elkamet philosophy form the basis for qualitatively and technologically outstanding products, which set standards.

Elkamet produces extruded profiles from industrial polymer materials for the vehicle and lighting industries as well as PA/PE/XPE tanks for fuel and hydraulic systems which are used in utility vehicles and motorcycles. Elkamet manufactures mudguards and vent system tubes for utility vehicles. In addition, Elkamet produces impact-resistant and shapely plastic parts for outdoor luminaires, which are made by means of special processes metallized, color-coated and resistant to yellowing (Faktor10®). Elkamet works as a systems developer.

The company's business partners value Elkamet's proven professional expertise in material and process development independent of major industry. Notable examples here are the highly functional sealing systems for car windows and windscreens, the heat stabilised or cold impact resistant Nylon/PE tanks according to application and the metal-plated plastics protected against yellowing (Faktor10®) for use in outside lights.
