Company Profile

Peikko is a family-owned Finnish company founded in 1965. Peikko supplies a large selection of concrete connections and composite beams for both precast and cast-in-situ solutions for a wide variety of applications. Peikko's innovative solutions make your construction process faster, safer, and more efficient.

Peikko Deutschland GmbH is part of Peikko Group, the Forerunner for fastening technology, composite structures and slim-floor systems in prefabricated, in-situ concrete and composite construction. The first Peikko unit outside Finland was established in Höringhausen in 1997 – the take-off for globalization of Peikko took place in Germany.

Our aim is to serve you with leading solutions in terms of quality, safety, and innovation. Peikko has a clear focus on regularly introducing new, tested innovative solutions and services. That is why our R&D investments are among the highest in the field.

Peikko has introduced many new and innovative solutions to the markets, which, in time, have formed the common way of constructing. A good example of such a solution is the column connection made using column shoes and anchor bolts. Peikko is also actively involved in standardisation procedures and international research projects and in cooperation with research institutes.
